1.25-1.27 when fully charged at 20°C (68°F)

INSPECTION OF AIR FILTER
(Paper Filter Type)

1. INSPECT AIR FILTER
   Visually check that the filter element is not excessively dirty, damaged or oily.

2. CLEAN AIR FILTER
   Clean the filter element with compressed air.
   First blow from the inside thoroughly. Then blow off the outside of the filter element.

(Washable Type)

1. INSPECT AIR FILTER
   Visually check that the filter element is not excessively dirty, damaged or oily.

2. CLEAN AIR FILTER
   (a) Blow dirt off in the filter element with compressed air.
(b) Submerge the filter element in the water and agitate it up and down more than ten times.

(c) Repeat rinsing in clean water until rinse water is clear.

(d) Remove excess water by shaking the filter element or blowing with compressed air.

NOTICE: Do not beat or drop filter element.

(e) Wipe off dust on the air cleaner case interior.

**INSPECTION OF ALTERNATOR DRIVE BELT**
(See step 3 on page CH-5)

Drive belt deflection:
New belt 6 - 7 mm (0.24 - 0.28 in.)
Used belt 8 - 11 mm (0.31 - 0.43 in.)

Drive belt tension (Reference):

Used belt 20 - 35 kg

**INSPECTION OF GLOW PLUGS**
(See page ST-7)
ADJUSTMENT OF VALVE CLEARANCE

HINT: Adjust the valve clearance while the engine is cold.

1. REMOVE INTAKE PIPE
   (See step 6 on page EM-34)

2. REMOVE CYLINDER HEAD COVER
   (See step 7 on page EM-35)

3. SET NO.1 CYLINDER TO TDC/COMPRESSION
   (a) Turn the crankshaft pulley clockwise, and align its groove with the timing gear cover groove.
   (b) (1PZ)
       Check that the valve lifters on the No.1 cylinder are loose and exhaust valve lifter on the No.5 cylinder is tight.
   (c) (1 HZ and 1HD-T)
       Check that the valve lifters on the No.1 cylinder are loose and valve lifters on the No.6 cylinder are tight.
       If not, turn the crankshaft one revolution (360°) and align the mark as above.

4. ADJUST VALVE CLEARANCE
   (a) Check only those valves indicated in the illustration.
       - Using a thickness gauge, measure the clearance between the valve lifter and camshaft.
       - Record the valve clearance measurements which are out of specification. They will be used later to determine the required replacement adjusting shim.

Valve clearance (Cold):
   Intake 0.15-0.25 mm (0.006-0.010 in.)
   Exhaust 0.35-0.45 mm (0.014-0.018 in.)

   (b) Turn the crankshaft one revolution (360°), and align the mark as above (See procedure step 3).
   (c) Check only the valves indicated in the illustration.
       Measure the valve clearance.
       (See procedure step (a))
(d) Remove the adjusting shim.
   - Turn the crankshaft to position the cam lobe of the camshaft on the adjusting valve upward.
   - Using SST, press down the valve lifter.
   SST 09248-64011
   HINT: Before pressing down the valve lifter, position the notch on the exhaust manifold side.

   - Remove the adjusting shim with a small screwdriver and magnetic finger.

(e) Determine the replacement adjusting shim size by using following (Formula or Charts):  

   - Using a micrometer, measure the thickness of the removed shim.
   - Calculate the thickness of the new shim so the valve clearance comes within specified value.
     \[ T \quad \text{Thickness of used shim} \]
     \[ A \quad \text{Measured valve clearance} \]
     \[ N \quad \text{Thickness of new shim} \]
     \[ \text{Intake: } N = T + (A - 0.20 \text{ mm (0.008 in.))} \]
     \[ \text{Exhaust: } N = T + (A - 0.40 \text{ mm (0.016 in.))} \]
   - Select a new shim with a thickness as close as possible to the calculated values.
   HINT: Shims are available in twenty sizes in increments of 0.05 mm (0.0020 in.), from 2.35 mm (0.0925 in.) to 3.30 mm (0.1299 in.)

(f) Install a new adjusting shim.
   - Place a new adjusting shim on the valve lifter.
   - Remove SST.
   SST 09248-64011

(g) Recheck the valve clearance.

5. REINSTALL CYLINDER HEAD COVER

COMPRESSION CHECK

HINT: If there is lack of power, excessive oil consumption or poor fuel economy, measure the compression pressure.

1. WARM UP AND STOP ENGINE
   Allow the engine to reach normal operating temperature.

2. DISCONNECT INJECTION PUMP (FUEL CUT SOLENOID) CONNECTOR

3. REMOVE GLOW PLUGS
   (See step 9 on page EM-57)

4. CHECK CYLINDER COMPRESSION PRESSURE
   (a) Install SST (attachment) to the glow plug hole.
   SST 09992-00024 (09992-00160)

   (b) Connect SST (compression gauge) to SST (attachment).
   SST 09992-00024 (09992-001 60, 09992-00211)
(c) Fully open the throttle valve.
(d) While cranking the engine, measure the compression pressure.

HINT: Always use a fully charged battery to obtain engine revolution of 250 rpm or more.
(e) Repeat steps (a) through (d) for each cylinder.

NOTICE: This measurement must be done in as short a time as possible.

Compression pressure:
- IPZ and 1HZ
  - 37.0 kg/cm² (526 psi, 3,628 kPa) or more
- 1HD-T
  - 35.0 kg/cm² (498 psi, 3,432 kPa) or more

Minimum pressure:
- IPZ and 1HZ
  - 27.0 kg/cm² (384 psi, 2,648 kPa) or more
- 1HD-T
  - 25.0 kg/cm² (356 psi, 2,452 kPa) or more

Difference between each cylinder:
- 5.0 kg/cm² (71 psi, 490 kPa) or less

(f) If the cylinder compression in one or more cylinders is low, pour a small amount of engine oil into the cylinder through the glow plug hole and repeat steps (a) through (d) for the cylinder with low compression.
  - If adding oil helps the compression chances are that the piston rings and/or cylinder bore are worn or damaged.
  - If pressure stays low, a valve may be sticking or seating improperly, or there may be leakage past the gasket.

5. REINSTALL GLOW PLUGS
   (See step 11 on page EM-81)

6. RECONNECT INJECTION PUMP (FUEL CUT SOLENOID) CONNECTOR
TIMING BELT

HINT: If replacing the timing belt before the timing belt warning light comes on, (light comes on after 100,000 km of driving), be sure to reset the timing belt counter of the speedometer to zero.

COMPONENTS
REMOVAL OF TIMING BELT
(See page EM-32)

1. REMOVE TIMING BELT COVER
   Remove the three seal washer, bolts, four clips, timing belt cover and gasket.

2. SET NO.1 CYLINDER TO BDC
   Turn the crankshaft pulley clockwise, set the No.1 and No.2 camshaft pulley grooves at each position (BDC mark).
